NKI Design presentation

New Athens International Airport

NKI project references and design proposals

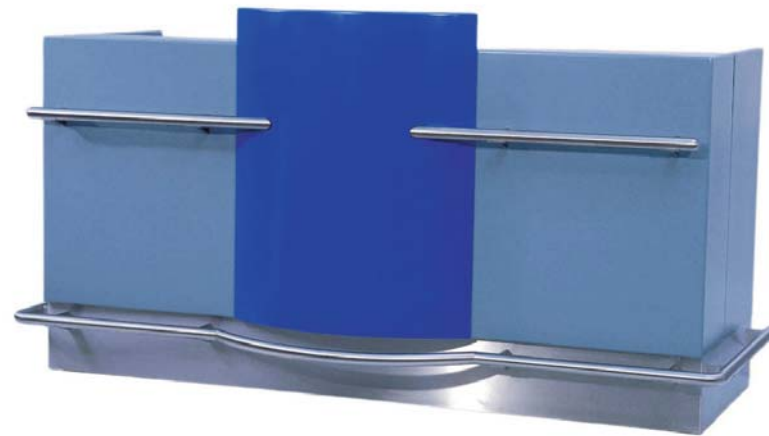

- Architects** : Hochtief + NKI counterdesign
- NKI Scope** : All counters
- Main Materials** : GRP with stainless steel details
- Year of installation** : 2001

Being one of Europe's latest terminal facilities, New Athens International Airport was the first project to prepare Athens for the Olympic Games of 2004. NKI proudly contributed to the realisation of this airport by providing all interior elements such as check-in counters with canopies and monitor encasings, immigration and gate counters and several information facilities. The furniture consists of GRP in grey and blue colours, strongly enhancing the airport's bright appearance.
