

NKI Design presentation Guangzhou Baiyun International Airport Guangzhou, China

Architect : Parsons
NKI Scope : Canopy with commercial signs and offices,
Main Materials : Mild steel construction with Aluminium cladding
Year of installation : 2004

In the summer of 2004 the new airport of Guangzhou Baiyun International airport opened his gates. NKI group engineered, produced, transported and installed the canopies of 9 domestic and 2 international check-in islands. The total weight of each of these structures was 40 ton metric tons.

The canopies were engineered to integrate with lighting, climate control and the FIDS system. A striking design feature is the commercial advertising system on top of the canopies. This system holds sheets of printed fabric (3x4 meters) which are easily exchangeable by using a sophisticated fixing system.

11 Check-in island canopies; powder coated Mild steel, with Aluminium cladding

Guangzhou-Check-in island office module; Aluminium 3 D curved cladding
